SUMMARY

Experience in web-based application development and AI/ML/DL projects. Strong foundation in data structures, algorithms, operating systems, IT project management, SQL, cybersecurity, and software engineering principles.

PROJECTS

Clothiva - E-commerce Web Application

[LIVE](#) | [CODE](#)

- Built a full-stack e-commerce platform with user authentication, product catalog, and cart-based checkout system
- Developed admin-side features for managing products, inventory, and user data.
- Implemented core features, including product browsing, search, and dynamic content rendering for improved user experience.
- Designed backend logic for managing products, users, and order-related operations using database integration
- Ensured responsive design and smooth user experience across multiple devices

PromptRefiner - AI Prompt Engineering & Reference Tool

[LIVE](#) | [CODE](#)

- Built a prompt engineering tool to create, manage, and evaluate prompts for LLM-based.
- Designed reusable prompt templates to support NLP tasks such as text generation, classification, and information extraction
- Applied prompt optimization techniques (few-shot learning, structured prompts) to improve model output quality.
- Focused on improving consistency and reproducibility in LLM-based outputs.

EyeCareAI - AI-Assisted E-Medical Platform for Remote Eye Disease Detection

- Built a full-stack telemedicine web application with role-based access for patients, doctors, and admins using Next.js, Node.js, and MongoDB
- Trained three independent deep learning models: a Custom CNN, EfficientNetB0, and ResNet5 on 4,217 original retinal fundus images expanded to ~21,000 samples through offline data augmentation, achieving 91.8% accuracy and 0.916 macro F1-score across four eye disease classes.
- Developed core platform features including appointment booking, secure medical record storage, and an OpenStreetMap-powered hospital locator.
- Designed and integrated patient, doctor, and admin dashboards with activity flows, use case modules, and Grad-CAM explainability support for AI predictions

PUBLICATION

Cotton Leaf Image Dataset for Disease Classification and Health Monitoring

Shafaeat Hasan Toufiq, et al.

Data in Brief (Elsevier), 2025

- Contributed to the collection and preprocessing of a dataset comprising **1373 original and 4963** augmented images of cotton leaves
- Supported development of AI/ML models for automated plant disease classification and health monitoring
- DOI: <https://doi.org/10.1016/j.dib.2025.112142>

EDUCATION

Bachelor of Engineering, Computer Science

East West University · 2021-2026

SKILLS

Language: Java, Python, JavaScript, C

Frameworks & Libraries: Spring Boot, Node.js, Next.js, Angular, React.js, Tailwind CSS

Tools & Platforms: Git, GitHub, Figma, CLI, Vite, Netlify, Vercel, Docker

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase
